

# Smart Pump – Bucket Fill

## Smart Pump Chemical Dispenser

The Smart Pump chemical dispenser is a compact and simple dispensing system.

This dispenser has an extension tube to enable the dispensed concentrated product to flow directly into a bucket of water. Independent from water connections, it draws chemicals from any size container with a simple lever operation.

Unlike plumbed-in systems, Smart Pump requires no water or electricity for installation or operation. It avoids the impact of insufficient water pressure, limescale and other deposits, all of which contribute to inaccurate dosing.

As Smart Pump is a completely stand-alone system, these problems simply do not occur.

## Product Properties

- Suction from any size container.
- Adjustable dose 10ml-30ml (with 5ml increments).
- Simple lever pull-and-push operation.
- Small unit - fits any environment.
- Installed within minutes.
